PRINTING PRESS

UV PRINT

UV printing is a relatively new technology which allows printing with UV cured inks directly onto uncoated surfaces. This means no more restrictions on placing multi-color logos on your gift items any more. We can brand full color images or logos with gradient and minute fonts onto a wide range of promotional items including, pens, lighters, diaries, metals, usbs, badge reels, stress balls, frisbee, or any other plastic or metal surface. With vibrant colors and no minimum order quantities UV Printing is the best method for your gift personalisation. With our inhouse production, we are capable to handle urgent uv printing jobs with no minimums and same day delivery option as well.

LASER ENGRAVING

The laser metal cutting table is built of strong lattice work which limits the surface contact with the base of the metal being cut. The support document that makes up the network work is spared onto the PC and substitution braces can be cut on the laser framework.

Propelled metal cutting highlights in the Spira Power Gasket Manufacturing LLC laser Software takes into consideration finish control of the metal cutting

LASER CUTTING

Laser beams are multifunctional tools. These possess the ability to cut through different materials irrespective of their thickness. Their utilization is one of the most progressive means of cutting through all sorts of materials. Laser cutting makes it possible for you to work on different materials to create patterns of various levels of complexity. From a few simple straight lines to complex patterns, the laser cutting services in Sharjah that we offer cover it all. Apart from simple plywood, acrylic, wood, cardboard, paper, MDF, plastic and ABS, you can opt for metal laser cutting as well, and we guarantee to deliver precision based results in the most professional manner.

DIGITAL PRINTING

Digital Print unit has high speed and high quality machinery to churn out any print job of high volume. Our digital print production facility has dry laser jet1 and wet toner link jet1 technologies supported by specialized digital print finishing equipment.

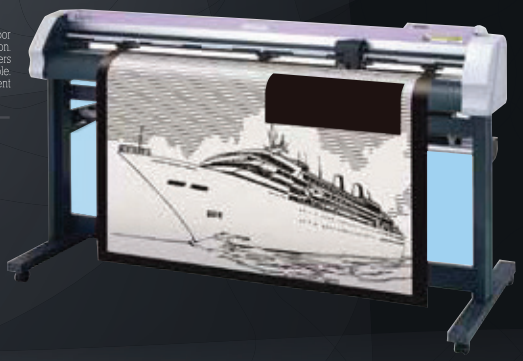

Digital Printing is the fastest printing method. Digital printing is economical for small quantities in contrast to offset printing. It has also the advantage of printing variable data in each print page. For example, an invitation addressed individually.

PLOTER CUTTING

We undertake digital print and cut sticker jobs.

Our high-end machines are capable of printing high resolution indoor quality prints on pvc stickers for outdoor usage without lamination. With no minimum requirement, we can turn around smaller orders with same day delivery. These can be die-cut in any shape possible. Apart from PVC Stickers, we also supply print & cut on Permanent Warranty Stickers. White, Gold, Silver, Transparent Stickers.

FABER MARKING

Fabric is quickly becoming a very popular material for both engraving and cutting. Natural fibers, as well as synthetic fabrics, are often cut and engraved with fantastic results with a laser system.

The best way to find out if your material works well with the laser is to contact our Applications Lab so we can test the material you will be using. Read below about a few of the different fabrics we've engraved with our laser systems, creating some very beautiful and unique products. When your done, be sure to check out our photo gallery and our Sample Club for examples of fabric engraving projects.
